DATE MAILED: 06/29/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

PTO-90C (Rev. 10/03)

	Application No.	Applicant(s)
	09/749,174	KANNIAINEN, LIISA
Office Action Summary	Examiner	Art Unit
	Jalatee Worjloh	3621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) FROM
THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
  after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any
  earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>*08 April 2004*</u>.

2a)☐ This action is **FINAL**.   2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is
    closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *1-40 and 51-59* is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *1-40 and 51-59* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All   b)☐ Some * c)☐ None of:

      1.☐ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage
         application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☒ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
    Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____ .

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

Response to Amendment

1.   This Office Action is responsive to the amendment filed on April 8, 2004, in which

claims 2, 3, 6-8, 12, 21 and 22 were amended and claims 51-59 added.

Response to Arguments

2.   Applicant's arguments with respect to claims 1 and 22 have been considered but are moot

in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

3.   The following is a quotation of the second paragraph of 35 U.S.C. 112:

> The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the
> subject matter which the applicant regards as his invention.

Claims 56 and 57 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite

for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention. Applicant's claims recite the phrase "charging data **for other of** the

merchant offerings". However, it is unclear what exactly the Applicant is claiming. Please

consider revising the phrase for clarity.

Claim Rejections - 35 USC § 102

4.   The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless —

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5.   Claim 21 is rejected under 35 U.S.C. 102(e) as being anticipated by US Publication No. 2002/0013774 to Morimoto.

Referring to claim 21, Morimoto discloses at least one buyer system for operation by a user desiring to purchase a product, at least one merchant system configured for providing a user the product and sending charging data indicative of a payment amount in consideration for providing the product (see paragraph [0041] & [0042]) and at least one payment system including a trusted server (i.e. "broker-agent server") and charging engine, for handling the negotiation of a contract for a transaction between the merchant system and the buyer system concerning the product, the trusted server being adapted to prepare the contract (see paragraphs [0012] & [0013]) and facilitate execution of the contract for the transaction between the merchant system and the buyer system (see paragraph [0065]), and the charging engine being adapted to receive and process the charging data for the payment (see claim 29, lines 12-16).

Claim Rejections - 35 USC § 103

6.   The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7.   Claims 1-15, 22-27, 33-40, 51 and 52 are rejected under 35 U.S.C. 103(a) as being

unpatentable over US Publication No. 2002/0013774 to Morimoto.

Morimoto discloses a trusted server (i.e. "broker-agent server"), the trusted server

prepares a contract for a transaction between a merchant system and a buyer system, sends the

prepared contract to the buyer system for acceptance by a user of the buyer system (see

paragraph [0012]) and a charging engine for calculating a charge to be paid to the merchant

system by the user (see claim 29, lines 12-16).   As per the step of returning the accepted contract

to the merchant system wherein the merchant system initiates the transaction based upon the

accepted contract, Morimoto teaches this process (see paragraph [0013]). Specially, Morimoto

teaches the process of conducting an auction, in which the preferred providers are provided with

an accepted contract. The merchant that offers the best price and benefits is bind to the accepted

contract and initiates the transaction. At the time the invention was made, it would have been

obvious to a person of ordinary skill in the art to develop a payment system including a trusted

server, a merchant system, buyer system and charging engine for online transactions. One of

ordinary skill in the art would have been motivated to do this because it reduces negotiation time

and activities by performing time consuming task electronically.

Referring to claims 2 and 37, Morimoto discloses the trusted server identifies whether the

merchant system has modified the contract (see paragraph [0014]).

Referring to claim 3, Morimoto discloses the trusted server finalizes the contract (see

paragraph [0065]).

Referring to claims 4 and 33, Morimoto discloses the merchant system comprises a web

server (ser paragraph [0039]).

Referring to claims 5 and 24, Morimoto discloses an interface between the merchant

system and the buyer system, the interface including a Wireless Application Protocol (WAP)

server for the buyer system supporting WAP connection (see paragraph [0066]). Notice,

Morimoto discloses utilizing wireless devices for the negotiation process, which suggests that the

interface may be a WAP server for WAP connection.

Referring to claims 6-8 and 34-36, Morimoto discloses the charge is for a product and the

product comprises at least a portion of a content source, wherein the content source comprises a

document; wherein the content source comprises a multimedia object (i.e. "CD") (see paragraph

[0042]).

Referring to claims 9-11 and 38-40, Morimoto discloses the buyer system comprises a

mobile terminal; wherein the mobile terminal comprises a web-enabled mobile phone; wherein

the buyer system comprises a computer system coupled to the Internet (see paragraph [0066]).

Referring to claims 12 and 23, Morimoto discloses a World Wide Web interface, the

interface interfacing the buyer system and the merchant system, i.e. "e-commerce site", (see

paragraph [0038]).

Referring to claims 13 and 25, Morimoto discloses the trusted server receives payment

from the buyer system, confirms payment by the buyer system and prevents non-repudiation of

the transaction by the buyer system (see paragraph [0054]).

Referring to claims 14 and 26, Morimoto discloses the charging engine receives charging

data representing billing information from the merchant system and transfers a charge amount to

the buyer system for payment by the buyer system (see paragraph [0063]).

Referring to claims 15 and 27, Morimoto discloses the charging engine converts the

received charging data into another form ready to be transferred to the buyer system (see

paragraph [0059]).

Referring to claim 22, Morimoto discloses at least one buyer system for operation by a

user desiring to purchase a product, at least one merchant system configured for providing a user

the product (see paragraph [0041] & [0042]) and at least one payment system including a trusted

server (i.e. "broker-agent server"), wherein the payment system handles the negotiation of a

contract for a transaction between the merchant system and the buyer system concerning the

product, and the trusted server being prepares the contract for the transaction between the

merchant system and he buyer system, sends the prepared contract to the buyer system for

acceptance by a user of the buyers system (see paragraph [0012]) and a charging engine for

calculating a charge to be paid to the merchant system by the user (see claim 29, lines 12-16).

As per the step of returning the accepted contract to the merchant system wherein the merchant

system initiates the transaction based upon the accepted contract, Morimoto teaches this process

(see paragraph [0013]). Specially, Morimoto teaches the process of conducting an auction, in

which the preferred providers are provided with an accepted contract. The merchant that offers

the best price and benefits is bind to the accepted contract and initiates the transaction. At the

time the invention was made, it would have been obvious to a person of ordinary skill in the art

to develop a payment system including a trusted server, a merchant system, buyer system and

charging engine for online transactions. One of ordinary skill in the art would have been

motivated to do this because it reduces negotiation time and activities by performing time

consuming task electronically.

Referring to claim 51, Morimoto discloses charging data in response to a single event

(i.e. after searching for a better price) occurring in accordance with the transaction (see claim 29,

lines 12-16).

Referring to claim 52, Morimoto discloses charging data in response to multiple events

(i.e. detecting an action, sending and agreeing to the contract and searching for a better price)

occurring in accordance with the transaction (see claim 29).

8.   Claims 16-19 and 28-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Morimoto as applied to claims 14 and 22 respectively above, and further in view of US

Publication No. 2003/0078862 to Kojima et al.

Referring to claims 16 and 28, Morimoto discloses a charging engine (see claims 14 and

22 above). Morimoto does not expressly disclose the trusted server receives payment form the

buyer system based upon the charge amount and sent to the buyer system, confirms payment by

the buyer system and signals to the merchant system that payment has been made. Kojima et al.

disclose the trusted server receives payment form the buyer system based upon the charge

amount and sent to the buyer system, confirms payment by the buyer system and signals to the

merchant system that payment has been made (see paragraph [0008]). At the time the invention

was made, it would have been obvious to a person of ordinary skill in the art to modify the

system disclose by Morimoto to include the trusted server receives payment form the buyer

system based upon the charge amount and sent to the buyer system, confirms payment by the

buyer system and signals to the merchant system that payment has been made. One of ordinary

skill in the art would have been motivated to do because it provides an indication that the

merchant will receive payments for the service provided.

Referring to claims 17-19 and 29-31, Morimoto discloses a trusted server (see claims 1 and 22 above). Morimoto does not expressly disclose the trusted server provides authentication for the transaction to the buyer system, the authentication for the transaction comprises authentication of the product; the transaction comprises authentication of the merchant system. Kojima et al. disclose the trusted server provides authentication for the transaction to the buyer system and the merchant system (see paragraph [0123]) and authentication for the transaction comprises authentication of the product (see paragraph [0100]). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Morimoto to include the trusted server provides authentication for the transaction to the buyer system, the authentication for the transaction comprises authentication of the product; the transaction comprises authentication of the merchant system. One of ordinary skill in the art would have been motivated to do this because it provides security; thus preventing fraudulent activities.

9.   Claims 20 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morimoto as applied to claims 1 and 21 above, and further in view of US Publication No. 2002/0107785 to Melchior et al.

Morimoto discloses a buyer system, financial system and merchant system (see claim 1 above). Morimoto does not expressly disclose a financial compensation system, the financial compensation system providing financial transaction support to the buyer system and the merchant system for the transaction. Melchior et al. expressly disclose a financial compensation system, the financial compensation system providing financial transaction support to the buyer system and the merchant system for the transaction (see paragraph [0009]). At the time the

invention was made, it would have been obvious to a person of ordinary skill in the art to modify

the system disclose by Morimoto to include expressly disclose a financial compensation system,

the financial compensation system providing financial transaction support to the buyer system

and the merchant system for the transaction. One of ordinary skill in the art would have been

motivated to do this because it provides sufficient customer service to the buyer and merchant.

10.   Claims 53-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morimoto

as applied to claim 21 above, and further in view of US Patent No. 6064987 to Walker et al.

Morimoto discloses a charging engine (see claim 21 above). Morimoto does not

expressly disclose the charging engine processes the charging data to cause the payment to be

made in multiple increments. Walker et al. disclose the charging engine processes the charging

data to cause the payment to be made in multiple increments (see col. 11, lines 57-65). At the

time the invention was made, it would have been obvious to a person of ordinary skill in the art

to modify the system disclose by Morimoto to include the charging engine processes the

charging data to cause the payment to be made in multiple increments. One of ordinary skill in

the art would have been motivated to do this because it provides faster means for data

transmission.

Referring to claim 54, Morimoto discloses a charging engine (see claim 21 above).

Morimoto does not expressly disclose multiple increments respectively correspond to multiple

events, each of the multiple events occurring in accordance with the transaction. However, this

difference is only found in the nonfunctional descriptive material and is not functionally

involved in the system. The charging engine processes the charging data in multiple increments

regardless of events. Thus, this descriptive material will not distinguish the claimed invention

from the prior art in term of patentability, see In re Gulack, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983): in re Lowry, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994). Therefore, at the time the invention was made, it would have been obvious to a person of ordinary skill in the art to process the charging data to cause the payment to be made in multiple increments regardless of the events because the multiple events does not functionally relate to charging engine in the system.

Referring to claims 55 and 59, Morimoto discloses the buyer system is adapted to terminate (i.e. "reject") at least a portion of the multiple events and cause the charging system to cease processing of the charging data and wherein the charging system terminates further buying of the merchant offering in response to a command received from the buyer system (see paragraph [0052]).

Referring to claims 56-58, Morimoto discloses terminating further buying of the merchant offerings after processing the charging data (see [0052]). Although Morimoto does not explicitly teach the buyer/merchant/charging system is adapted to cease further buying of the merchant offerings after the charging system has processed the charging data for other of the merchant offerings. This is an inherent step; that is, after processing the data "further buying" is automatically ceased for each transaction. At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Morimoto to include the buyer/merchant/charging system is adapted to cease further buying of the merchant offerings after the charging system has processed the charging data for other of the merchant offerings. One of ordinary skill in the art would have been motivated to do this because it eliminates fraud.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jalatee Worjloh whose telephone number is 703-305-0057. The examiner can normally be reached on Mondays-Thursdays 8:30 - 7:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 703-305-9768. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306, 703-746-9443 for Non-Official/Draft.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
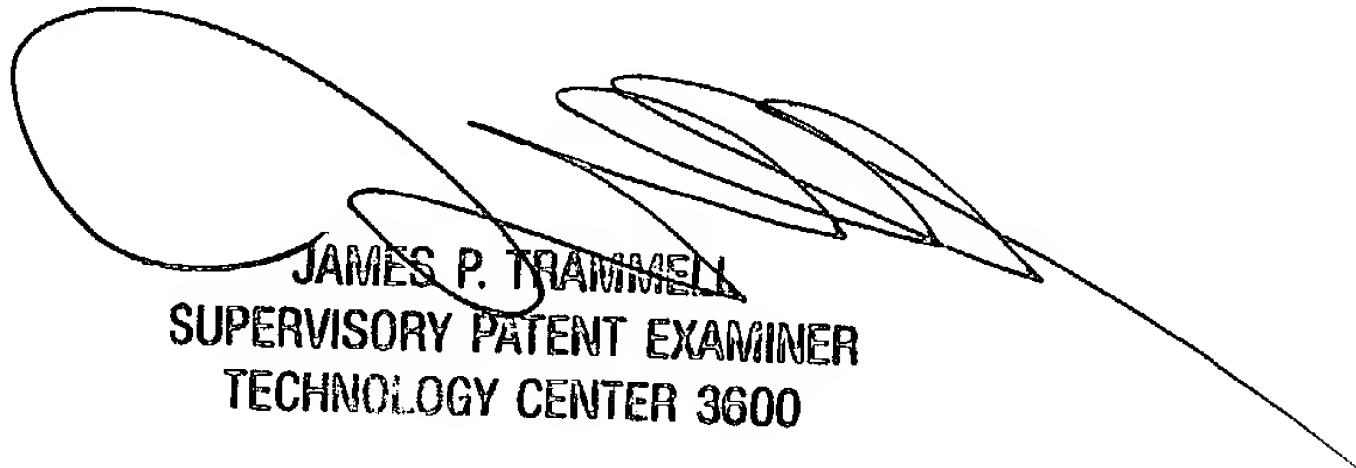

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
PO Box 1450
Alexandria, VA 22313-1450

Hand delivered responses should be brought to Crystal Park 5, 2451 Crystal Drive, Arlington, V.A., Seventh floor receptionist.
